ABOUT

I'm a UX Designer from Ukraine, currently working remotely. I strive for simple and flexible design even for complex projects. The main value for me is to create a design for products that can be useful for both users and business. I believe that user-centered design, as well as properly gathered requirements, is a prerequisite to being successful in software products development.

EXPERIENCE

Company	Business	Role	Year
Remote/Upwork	Various	UX, UI, Mob	Jan 2018–Now

Recently I'm working remotely because such approach gives me more interesting projects, skills and motivation to learn all the time. The main projects I'm working on right now are from Blockchain and Telecom spheres.

Company	Business	Role	Year
Cue Connect	E-commerce	UX, UI, Web	Mar–May 2017

An e-commerce marketing platform for online retailers. With help of new design for the web application, the company had gotten new perspectives for growing its business.

Company	Business	Role	Year
Leantegra	IoT	UX, UI, Web, Mob	Nov 2014–Mar 2017

An IoT company developing software products for foot traffic engagement and analysis.

Achievements (projects from scratch):

- A B2B web application for beacon deployment and location analytics (SaaS).
- Mobile applications for Android/iOs of retail, shopping malls, ecommerce markets.

The design projects helped the company to get a good fit for projects in retail, aviation, and deploy beacons devices in more than 300 venues in the US, Israel, and Ukraine.

Company	Business	Role	Year
Avox	Telecom	UX, UI, Mob	Apr 2013–Oct 2014

A messaging and data communication over GSM voice channel regardless of Internet connection.

Achievements (projects from scratch):

- An Android GSM termination app for earning money through the Internet (voice traffic).
- A web helpdesk interface for users of the termination app.

The Android app for voice traffic helped the company scale business in Europe and the US.
